

Flygt Pump, Newbury

We were called to a site in Newbury that had a Flygt submersible pump and panel installed, the pump had tripped, the tank was full.

After our service engineer looked at the setup we managed to get the system running and pumped down. We found there is a fault with the switch relay causing the panel to trip out. The next step will be to install a new panel as the Pump (2005 still going) is ok to use still.

Another happy customer due to Alan's great service and technical knowledge.

About Flygt

Flygt, a brand of Xylem, is a world-leader in manufacturing dry and submersible pumps, mixers and other accessories used for water and waste water. Also within their portfolio is the control equipment which will enhance the use of the Flygt pumps.

Flygt is the originator of the reliable, energy-efficient electrical submersible pump and with over 50 years mixer experience this is a solid manufacturer for your pump requirements.

Pump Technology Services has the experience & technical knowledge to support the UK market for Flygt products.
